ONEDENTIA 37R003600120008-5 Approved Reasters 6 1004102117 CENTRAL INTELLIGENCE AGENCY INFORMATION REPORT 25X1A COUNTRY Germeny (Russian Zone) DATE DISTR. 1 Nov. 1949 SUBJECT German Radar and Electronic NO. OF PAGES 7 Equipment Seized and Developed by the Russians NO. OF ENCLS. ACQUIRED 25X1A DATE OF IN SUPPLEMENT TO

25X1X

PLACE

ALC Plant at 35-38 prontheimerstrasse, BEHLIN-W 20. Type "FLUM 41" and "T UN 42" Rader Sets Obsolete long-range warning set; wave length, 1.5 to 9.4 m. In quantity production in BENLIN since 1942. Type "SN 2" Radar Set تفليويه In quantity production in BENSEN since 1943. "ANGBACH", "KULMBACH" and "ROTTERBACH" lader Sets In quantity production in BE LIN since late 1944. Type "BERLIN" Radar Set Prototype and blueprints secured by the Soviets in BURLIE; set up in a serviceable condition in the Czech "TU" Institute. ೦೦ Remote Control Mechanisms for Searchlights, directaf Armament and Radar Sets; Command Guidance Equipment for V-Missiles In quantity production in BrackIN, further developed in BENSEN No Change in Class. C. AVESTALLA MARCALINA Declassified Class. Changed To: TS S (6) Auth.: HR 70-2 -06/06/28 By: 20%

CLASSIFICATION SECULT/CONTROL - U.S. OFFICIALS ONLY

NAVY TE

CENTRAL INTELLIGENCE AGENCY

f. Remote Control "BRIGG" Type Receiving Set

Presumably for bombs and V-missiles; wave length about 25 cm, modulated with audio frequencies, developed by the Telefunken Firm. The licensed construction of these sets was prepared in BNASEN late in 1944. Incomplete sets and records were secured by the Soviets in LE SSE.

g. Submarine Sound Transmitter, AB-set of Type "A-205", "A-206" Impulse Tube Transmitter, 5 kilowatt, 20 kilocycles

In quantity production in BERLIN since 1943. Sets and blue-prints secured by the Soviets in PERLIN. Reconstructed in the BERLIN-KCEPERICK GETA Institute (MSP), since additional sets were not available in BERLIN after the dismantling.

h. "ST-Set"

Submarine sound transmitter, receiver and indicator for the location of submarines and fine dfields. Peak voltage about 500 watt, 15 kilocycles. In quantity production in BESLIN since 1944; sets and blueprints secured by the Soviets in BERLIN.

i. "RM-Set"

Variable proximity fuse developed by Dr. RINCKHAPH for the "Zaunkoenig" set. In quantity production in BERLIN and BENSEN. Installed in torpedoes at the FUERSTER ALDE "Pintsch" firm and the Z'ICKAU "Auto-Union" Plant. Sets and complete production records secured by the Soviets. A demonstration model of the "Zaunkoenic" set was set up by Dr. KROCHMAEN (deported to LEMINGRAD in October 1946) and by graduate Engineer PISCFITZ in the GENA Institute (MSP) in BERLIN-KOEPENICK.

j. "Pi 65" 3et

A further development in BUNSEN of the "RM-set", designed for the aircraft launched type "LTF-5b" torpedo. The first.laboratory prototypes were test fired in GOTERHAFEN-HYKE KRUND in late 1944. For units of an improved version of the set were produced by the end of the war, but test launchings from aircraft were not undertaken. Prototypes and incomplete blueprints were secured by the Soviets. These prototypes were set up at the GMMA Institute and the incomplete blueprints were supplemented there.

k. "S-30" Designated "PFAU"

An automatic pilot for the "LTF-5b" aircraft-launched torpedo; developed in RECOTA. About 300 sets were manufactured by the end of the war. Test-launched in GOTEMEAFEN-HUXDICHUND and since February 1949 in TRAVELUMBE. The results were good when launched from tubes; only few tests were made in launching from aircraft. Sets and technical records secured by the Soviets in RECOMME. The sets were thoroughly examined and a technical description was drawn up at the GEMA Institute and at the BODEMEACH TTU branch plant (Czechoslovakia).

EMORET-COUTROL/US OFFICIALS ONLY

Approved For Relicase 2000/10/3/47~: CLA-ROPE 2-0044-67 ROPE 3-000-5

CENTRAL INTELLIGENCE AGENCY

1. "LERCHE"

a set to enable a torpedo to seek its targets by means of a cire connection from the submarine. Developed in BURLIN.

Initial tests were made in COTEMPATEM and TOKERNFOURDE in early april 1945. Incomplete prototypes and records secured by the Soviets in BURLIN. Reconstruction and further development in a naval institute in KARLSHORST. The Soviets in 1946 tried in vain to obtain the cooperation of graduate engineer GOETZE, one of the leading development engineers for this set. GOETZE now lives in the "estern Lones.

m. Proximity Fuse for Orop Lines

"D-103" for 250-kg river mines with pressure capsule manufactured in the LEIPZIG HAGAG Plant. In quantity production in BE SEM since late 1944.

"IDA-105" for 1,000-kg mines. Ignition by magnetic induction, water pressure and noise. Completely tested, mantity production prepared in Ed Sall in early 1945.

"AA-106" for 1,000-kg mines. True acoustic ignition set with directional effect. Developed in BU SEH, not yet completed at the end of the war.

Sets and records secured by the Soviets in RESSEM. Mine ignition apparatus were being developed in a RARLSHORST institute. The Soviets have secured the cooperation of some of the HUSAG engineers, including the former laboratory chief Dr. CHRISTOPH, and Engineer SOLGER, a former constructor of the AEG.

n. "Data Computer 41 6"

An electrical data computer (lead value computer) for entiaircraft artillery units. Developed at the ADG and Askania plants. The Askania set was scheduled to be manufactured under license at the ABG Plant in 1945.

Source is not fully informed on the nature of the technical records secured by the Soviets in the BERLIN AEG Plant.

2. AEG Branch Flant in BUIDEL, County of TUTSCHEN-BODENBACH, Czechoslovakia

In order to be safe from air attacks, a section of the BYRLIN "AEG Fabrik brontheimerstrasse" was transferred to BELIEV in July 1943 and installed in the BRIEF and FRIEDRIC TRAIL near BRIEF textile plants operated by the FALTAVICH Firm.

The following sets were produced in this branch plant:

MORT-COMPOL/US CFFICE LS OILY

Approved For Release 2000 10 SCI7 - CVA-R DP82100453 R0003600120008-5

CENTRAL INTELLIGENCE AGENCY

a. Proximity fuse, "RT set" for the "Zaunkoenig" type torpedo.

b. Type "SN-2" aircraft radar set (transmitter and receiver).

- c. Sets "0-103", "IDA- 05" and "AA-106".
- d. "PFAU" ("S 30") for the aircraft-launched type "LTF-5b" torpedo.

The rollowing sets were developed in the developmental laboratories:

- e. "P1-65" for the "LTF-5b".
- f. Temote control mechanisms for radar sets of type "ANTBACH", "TEMENTALL" and others, as well as for the "DOMAU" Plant.

The lant had about 1,000 employees including foreigners (Frenchmen, Belgians, Dutchmen, Mussians). Czechs were not employed in technical departments; in other departments there were only two or three of them. Flant manager was Dr. Ing. "TREER, a German.

After the German surrender the plant was declared Czech state property. The plant was not danaged during the war.

Ingineer Lumir SITH, the Czech Covernment Ilenipotentiary, was the first to issue orders for a stock-taking of machine tools, tools, neasuring equipment and all available material.

The following persons were appointed as Czech state commissioners:

Ir. SPINDLER, and later Messrs: FORAK and HOLLUB, all from the RAGUE ALG Bureau.

Soviets, and later Czech engineer commissions appreared at the plant from June thru August 1945 to familiarize with the "themselve war production formerly conducted at the BEUSEM Plant. The Soviets seized all original blueprints and protetypes produced or developed there. The Czechs removed everything that the Soviets had left.

The following engineers were employed by the Czechs:

(1) Graduate Engineer Rolf PACKES (for mine ignition mechanisms)

(2) Graduate Ungineer Karl PFISTER (for remote control mechanisms)

(3) Graduate Engineer WE DEL (for the "FAN" Set)

(4) Graduate ingineer "ITT

ECRET-COMPROL/US OFFICE LS CHLY

Approved For Release 2001/03/17: CIA-RDP82-00457R003600129008-5 SECRET/CONTROL - U.S. OFFICIALS ONLY5X1X

CENTRAL INTELLIGENCE AGENCY

- (5) Graduate Engineer Vitaly GROSSE (for mine ignition sets)
- (6) Engineer MIRSCE
- (7) Engineer FROLELING

(for remote control deta)

(8) Engineer STOLL

These engineers first worked in BETTET, in the BODETBACH Tlant of the Wzech "TU" Institute since late 1945, and since 1947 in the PRAGUE "TU" lant. They were permitted to return to Germany in the second half of 1948, but the following engineers went to Yugoslavia to work in the radio industry and in power plants:

Graduate Engineer 'ENDET, Ingineers MINECT, FROTTLING, in addition to Engineer TORMOT from the BODETBACK AEG Plant.

The AEG engineers listed cooperated in BODE BACE with the engineers of another AEG Plant evacuated from BERLIN, the "Technical-Physical orkshops" ("TP") and of a branch plant of the "Lorenz" Plant. The names of these engineers are not known to source.

The following additional German engineers stayed in Czecho-slovakia until the fell of 1948:

NATURE, formerly at the ANG "TF".

EXIUSE, formerly at the MODE BACH "Lorenz" Mant.

Mill in Ozechoslovekia area

Engineer LOGS, formerly at the AEG "THE", now in TRACHE. Craduate Agrineer SECTE.

5. Further Development of German Inventions in the "TV" Hilltary-Technical Enstitute, in GRAGUE

The RAGUL TAU Institute, which maintains a branch plant in BODE BACH, was in close contact with Soviet agencies. The study groups were supervised by the following Czech officers:

aj. BILEK

Col. MODICIA

aj. DESPERAT

Engineer RAYER-CZNOKY, who served with the Doyal Air Force during the war.

The following German inventions were being developed at this institute in the fall of 1948:

SECRET-COMMOL/UT OFFICE L3 ONLY

CENTRAL INTELLIGENCE AGENCY

a. Remote-controlled bombs to be employed against ships.

of type "HS 293", "FA 1400", produced in the BODEMBACE "Schmidding" Plant. * The bombs were then assembled by the BODETEACH "Elfis" Firm. North release tests were to be made in Turoslavia, but were cancelled for political reasons. Egotiations with Foland were under way in the fall of 1948; no details available.

The wireless control mechanism worked on a carrier wave of about 50 kilocycles, modulated by four audio frequencies functioning on the impulse frequency basis.

The following two methods were employed for the steering of the bomb:

- (1) transformation of impulses into the recuired rudder operations by a complimated electrical control apparetus;
- (2) Activating of flap control in the rhythm of impulses.
- b. adar sets

"SNAB" sets, an obsolete aircraft set, "orking on a three mater wave.

"Lichtenstein" set

"Berlin" set, a 9-cm set, developed by the "Telefunken" Firm.

These sets were set up in a serviceable condition at the ""Tu" Institute.

c. Proximity fuse for and shells

Experiments were made in the laboratory with US-type fuses which are based on the principle of the variation of the variation of a small transmitter.

- d. Autometic pilot of type "PFAU" for torpedoes
- A demonstration set was set up and a comprehensive technical description was drawn up.
- e. Radio telephone sets for gliders
- I. Teleprinters

Continuation of the production begun by the BOD WBACH "Lorenz" Firm.

25X1A Coic ent:

This is the first comprehensive report on the developmental work and technical production of the ANG Firm, which, after the war, was taken over by the Boviets and the Czechs, as well as on the BUNEL (E 51/F 55) ANG Branch Mant

SECRET-CONTROL/UD OFFICE LI O'LY

CENTRAL INTELLIGENCE AGENCY

s that two plants of the AEG Firm and one

The report reveals that two plants of the AEG Firm and one plant of the "Lorenz" Firm were transferred to the area of BODEFACH-BENSEL in 1948.

The undamaged plants were taken over by the Czechs in May 1945, but all original blueprints and prototypes sets were comfiscated and shipped away by the Soviets.

The BODE BACH and BE SUM ALC plants were incorporated into the nationalized CKD enterprise, the Lorenz Flant was incorporated into the TESLA Flant.

The developmental work of the ANG was continued by the MODETBACH lilitary-Technical Institute (VTU). Since no Czechs were employed in ANG plants during the war, the further development and reconstruction of the sets was possible only with the help of German technical personnel.

The report confirms the previously reported activities in the field of radar techniques, of remote control devices, electro-acoustics and proximity fuses.

From the incorporation of the AEG plants into the nationalized CAD enterprise, it can be inferred that these plants no longer nanufacture radio sets, since the entire radio industry is incorporated into the nationalized TESLA enterprise.

The filitary-Technical Institute (VTU), in cooperation with the felevision expertment of the TDSLA entermise, has developed the first Czech television set, which was shown to the public in the spring of 1948.

The "Schmidding" sizm (". Schmidding, Copper and luminum Force, landfacture of sparatus and Tachines in KOELN-MOSFILD) operated a branch plant for rocket power plants in BODUSACT. Lemote-controlled bombs and propelling charges of powder for AAA rockets were developed here, and parts for V-2 missiles and torpedoes were manufactured in this plant. The turbo-jet power plant of type 00* was manufactured there at the end of the war. This confirms a previous report.
